

Framed Motorised Shutter Price List

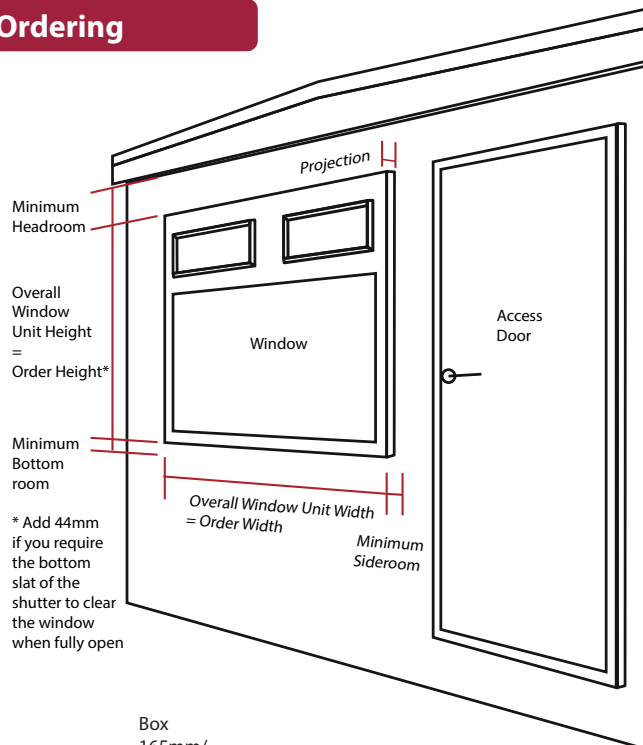

November 2020 Prices exclude VAT & Delivery

ProtectaRoll
Motorised Security Shutters

Shutters are supplied fully assembled up to 1500mm high, simple 4-part assembly above 1500mm high and limits on all framed shutters are factory pre-set.

Ordering

* Add 44mm if you require the bottom slat of the shutter to clear the window when fully open

Motorised shutters designed for easy, fast installation.

To Order:

Please see interactive order forms for full details.

The shutter is fitted around the outside of the window unit. You must provide the following dimensions:

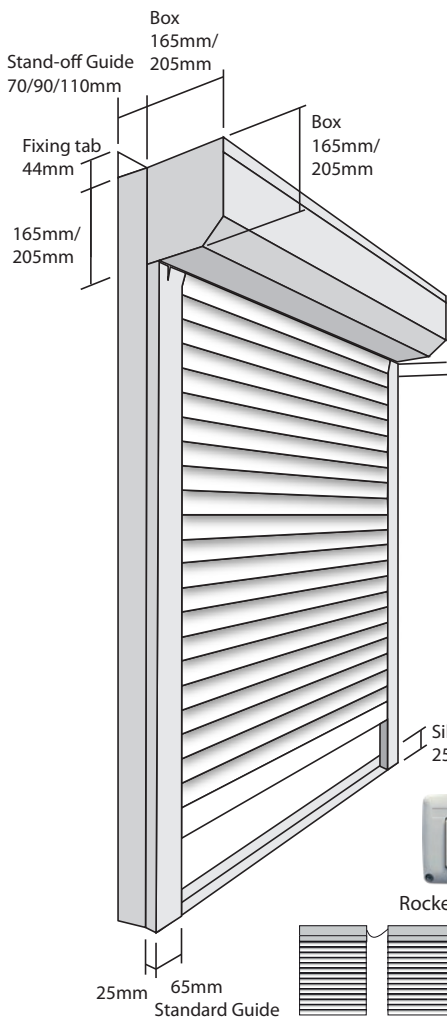

- Measure the overall window unit width (not just the glazing)
- Measure the overall window unit height (not just the glazing)
- Measure the overall window unit projection from the cabin wall

The shutter requires the following clearances:

- Sideroom:** 90mm to each side
- Headroom:** 165mm box (+44mm for fixing tab) shutters < 1750mm high
If full opening is required, allow an additional 44mm for an extra slat that must be retained in guide when the shutter is fully open. 165mm + 44mm + 44mm = 253mm
- Headroom:** 205mm box (+44mm with stand-off guide) shutters ≥ 1750mm high
If full opening is required, allow an additional 44mm for an extra slat that must be retained in guide when the shutter is fully open. 205mm + 44mm + 44mm = 293mm
- Bottom room:** 44mm for fixing tab

If the window projects from the cabin wall, an offset guide can be supplied to allow the shutter to fix clear of the cabin by 70, 90 or 110mm.

Shutters for access doors require the same measurements i.e. the outer dimension of any frame.

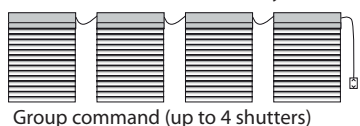

Standard Colours

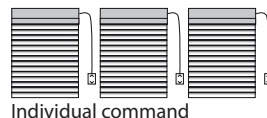

44mm* Hang-down

*If full opening is required, allow an additional 44mm for an extra slat that must be retained in guide when the shutter is fully open

Unframed Motorised Shutter Price List

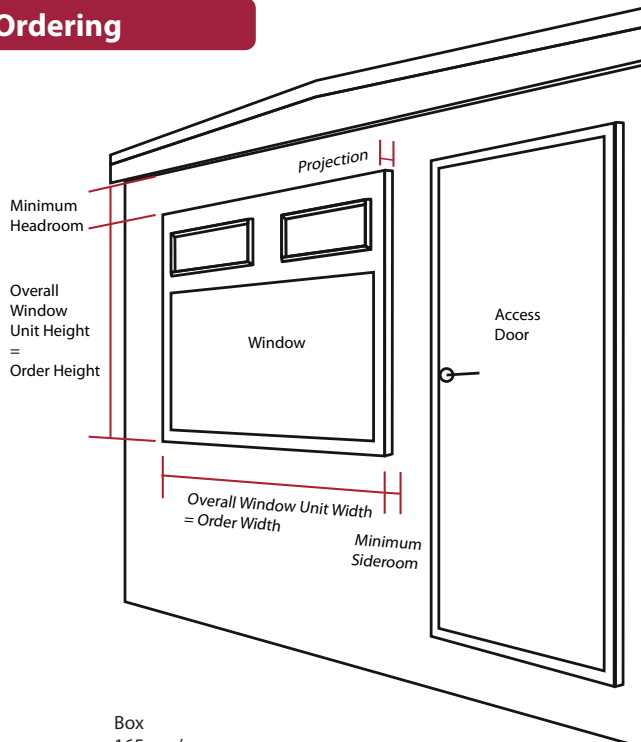

November 2020 Prices exclude VAT & Delivery

ProtectaRoll
Motorised Security Shutters

Shutters are supplied un-assembled and up/down limits must be set on site.

Ordering

Motorised shutters designed for economical installation.

To Order:

Please see interactive order forms for full details.

The shutter is fitted around the outside of the window unit. You must provide the following dimensions:

- Measure the overall window unit width (not just the glazing)
- Measure the overall window unit height (not just the glazing)
- Measure the overall window unit projection from the cabin wall

The shutter requires the following clearances:

- Sideroom:** 70mm to each side
- Headroom:** 165mm box shutters < 1750mm high
If full opening is required, allow an additional 44mm for an extra slat that must be retained in guide when the shutter is fully open. 165mm + 44mm = 209mm
- Headroom:** 205mm box (+44mm with stand-off guide) shutters ≥ 1750mm high
If full opening is required, allow an additional 44mm for an extra slat that must be retained in guide when the shutter is fully open. 205mm + 44mm = 249mm

If the window projects from the cabin wall, an offset frame can be supplied to allow the shutter to fix clear of the cabin by 70, 90 or 110mm. For details see the other side of this price list.

Shutters for access doors require the same measurements i.e. the outer dimension of any frame.
